

CMC's Latest Offering In Porcelain Slabs – Pallissandro

By **Editorial Team** -- 05 January, 2022

Classic Marble Company (CMC) has introduced its latest offering from the Kalesinterflex range of porcelain slabs, the Pallissandro. Innovative technology combined with the look and feel of natural marble makes this product just the right kind of application for wall and flooring applications. Launched under the marble series, the Pallissandro is a rich, white porcelain slab with hints of grey streaks, as found in natural marble, running across the surface. The product is Kaleguard coated - a unique surface protection that has antibacterial, water-repellent and self-cleaning (photocatalytic) features. The Pallissandro can be installed in both exterior and interior wall cladding to flooring for both the classic and modern architectural styles.

Kalesinterflex porcelain slabs are elastic with a 5.5m range of flex. The slabs can be installed over concave and convex surfaces and the patterns too can be customized to suit the interior of the area. The slabs are available in size 3000 x 1000 mm and 3600 x 1200 mm and in 5 mm and 3 mm thicknesses. The product is A1 class fire-resistant and does not emit toxic smoke, making it an ideal product for facades.

Kalesinterflex slabs are thin, lightweight slabs that offer ease in handling for wall cladding and façade applications. Being a porcelain material, the product is hard, highly resistant to fire, scratch, water and dust. Its smooth surface does not retain dirt making it almost completely maintenance free. The Pallissandro is manufactured in a COVID19 safe environment.
