Classic Marble Company (CMC) has introduced a premium KalingaStone quartz product - the Bianco Venatino. The milky white quartz slab has subtle grey veining across the surface giving it a refined look. Inspired by cutting-edge design and innovative technology, the quartz slab is ideal for countertop and backsplash applications in modern kitchens. The almost obscure, gentle grey veins run across the pure white quartz slab making the kitchen appear as delectable as the culinary it will host.

KalingaStone Quartz is certified by NSF International as a safe and secure surface for food handling. Bianco Venatino is non-porous with a low absorption rate making it immune to staining and is easy to maintain. The new offering from CMC uplifts the glamour quotient of functional modern kitchens.

An engineered material, Quartz slabs are extremely strong and hard, hygienic, non-porous, and popularly installed in applications that demand durability with aesthetics. The material is stain-resistant as well as is resistant to wear and tear including scratches. This minimizes the need for any special maintenance. Particularly in kitchens, Quartz slabs are an ideal choice since the stone does not corrode or discolour despite coming in direct contact with alkali or acids or other regular kitchen spills. It also is resistant to heat and cold making it a perfect candidate for kitchens.

The slabs can be made to desired shapes and sizes and are compatible applications for sink and hob fittings. The surfaces have perfect consistency in the shade, thickness and texture. A fine-looking blend of décor and utility, the Bianco Venatino is a superlative choice for applications in contemporary kitchens. CMC is an environmentally conscious brand and ensures the use of healthier and non-toxic materials during manufacturing.
