

## MARCH 2021

TILES || INDUSTRY SPEAKS

Amit Shah,  
Managing Director,  
Classic Marble Company

### Terracotta is quite durable and has been in use for quite some time

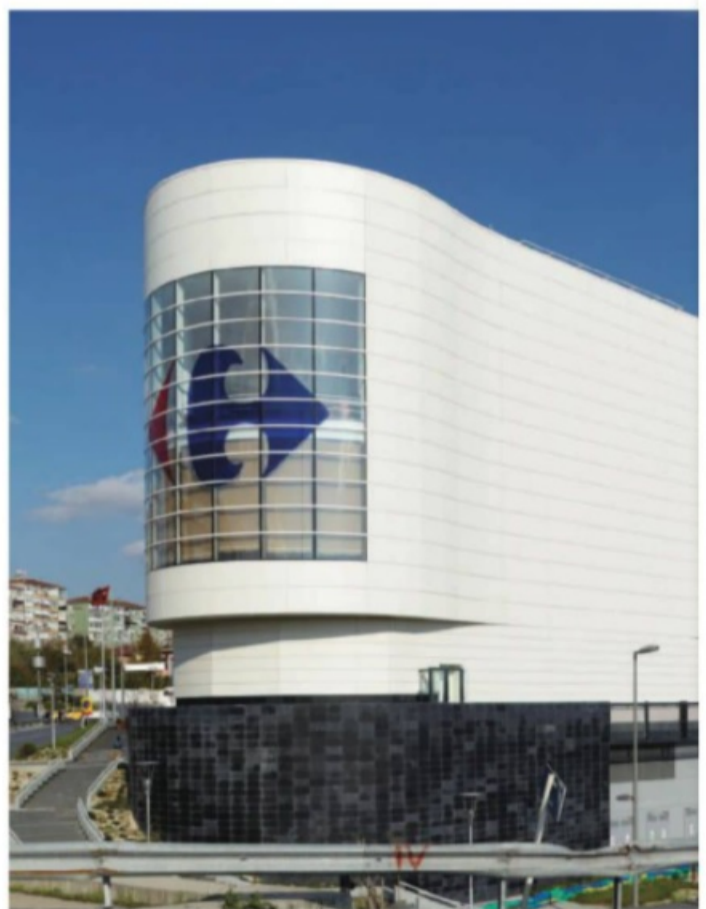

*However, at present, there are much better and economical tile options available in the market. CMC's Kalesinterflex from Turkey is bacteria resistant and also A1 class fire resistant, says Amit Shah, Managing Director, Classic Marble Company.*

**H**ow can tiles enhance the design value of interiors?

From all possible range in colours to pattern and sizes and finishes, tiles can be installed to perfectly suit almost any application. CMC's range in the Quadra porcelain slabs collection consists of a range of over 20 products in a variety of colours and patterns suited for a wide range of applications. Quadra's homogeneous body design product is a perfect choice for creating seamless installations. The cross-section of Quadra slabs has the same design as its surface. This allows the slab to be cut and polished while extending the design even at its edges.

The hi-tech, extra-large format Quadra surfaces are evenly textured, non-porous, and resistant to chemicals, scratching and fire, satisfying all the primary requirements for a functional kitchen-top and flooring. Made using environment-friendly, sustainable material, the slabs are extremely strong, durable and are low on maintenance. Quadra porcelain tiles can be used in flooring, kitchen counters and wall cladding especially to create bookmark features. It is available in matt finish.

Terracotta tiles are resistant to mold and bacteria, do you feel in the current scenario they will re-emerge as one of the choicest materials for tiling purposes? What is the other option we have material wise?
