CMC Introduces Metal Copper – Metallic Porcelain Slabs for Modern Architecture

Posted On July 8, 2021 in [Product Launch](#)

The Metal Copper is adaptable to any type of application, from exterior cladding to interior wall cladding, flooring, furniture for both classic and modern architectural styles

Classic Marble Company (CMC) has introduced its latest offering from the Kaleinterflex range of porcelain slabs: Metal Copper. Innovative technology combined with natural metallic look pigment gives this product the feel and robustness of metal. Launched under its metallic series, the Metal Copper is entirely food-safe and also has a Kaleguard coating. Kaleguard is a unique surface protection application that has antibacterial, water-repellent and self-cleaning (photocatalytic) features. The Metal Copper is adaptable to any type of application, from exterior cladding to interior wall cladding, flooring, furniture for both classic and modern architectural styles.

Kaleinterflex porcelain slabs are elastic with a 5-5m range of flex. The slabs can be installed over concrete and convex surfaces and the patterns too can be customised to suit the interior of the area. The slabs are available in size 3000 x 1000 mm and 3600 x 1200 mm and in 5 mm and 3 mm thicknesses. The product is A1 class fire-resistant and does not emit toxic smoke, making it an ideal product for facades.

Kaleinterflex slabs are thin, lightweight slabs that offer ease in handling for wall cladding and facade applications. Being a porcelain material, the product is hard, highly resistant to fire, scratch, water and dust. Its smooth surface does not retain dirt making it almost completely maintenance free. The Metal Copper is manufactured in a COVID-19 safe environment.
