Classic Marble Company (CMC) is known for its exquisite collection of natural stones. With the recently launched 9th Avenue Collection, CMC promises to bring to the country the rarest of the rare stones from the best quarries in the world. But it's not just their portfolio of natural stones that leave us spellbound, they have an extremely exhaustive collection of engineered stones as well. With over 150 shades and patterns to choose from, the KalingaStone Collection of Engineered Marbles is easily a favourite among the architects and interior designers. Quartz is an engineered material, which makes it extremely strong and hardy. The fact that it is stain and scratch-resistant, durable and extremely low on maintenance, makes it an excellent choice for kitchens. "Particularly in kitchens, Quartz slabs are an ideal choice since the stone does not corrode even after coming in direct contact with turmeric, lime, citric acids or other regular spills. Quartz is an extremely tough stone designed to resist wear and tear while is also elegant keeping the kitchen décor in mind," informs Amit Shah, Managing Director, CMC. You have the option of choosing from a collection of 150 colours and patterns -- from the incredibly subtle to the wildly dramatic. The Quartz Collection is perfect for modern and contemporary spaces.

Seen here is the Tundra from the Fiorito Collection. Its sophisticated colour palette, subtle pattern and the fact that it's extremely durable makes it a great option for kitchen countertops. The Nuvolato White from the Venata Collection is another stunning option if you are looking for a refined and minimalist option for your kitchens. Pristine white in colour, with fine grey veins, this one's all about subtle glamour. The fact that it is white and stain-resistant makes it perfect for people who love white but have refrained from using it in the kitchen. "Particularly in kitchens, Quartz slabs are an ideal choice since the stone does not corrode or discolour despite coming in direct contact with alkali or acids or other regular kitchen spills," informs Shah. It is also NSF (National Sanitation Foundation) certified which makes it absolutely perfect for kitchens.
