CMC Unveils Translucent Porcelain Slabs from its Kalesinterflex Range

Classic Marble Company (CMC) has launched a translucent porcelain slab - Yellow Onyx from its Kalesinterflex range. The yellow porcelain slab exhibits swirls in a darker shade across its surface and easily resembles the natural Onyx. When lit from the rear, the illuminated slab displays vibrant hues of gold, glowing up the adjoining space. The application ensemble creates an aura of exuberance and romance in the installed area.

One of the most distinguishing features of the product is its flexibility. With a 5.5m range of flex, the slabs can be installed

over concave and convex surfaces and the patterns too can be customised to suit the décor. The feature allows engraving on the slab surface to design curves or even combine patterns merged with other products to form beautiful backlit structures.

The slick 3mm Yellow Onyx slab is extremely light in weight, which makes it convenient for various vertical applications such as bathroom walls and wall highlighters. The 3000mm x 1000mm size makes it a perfect product for worktop applications such as bar counters, tabletops, and reception counters, among others. Yellow Onyx is the next

best alternative to the natural Onyx stone for backlit applications with engraved patterns.

Kalesinterflex products are thin, lightweight slabs that offer ease in handling for wall cladding and façade applications. Being a porcelain material, the product is hard, highly resistant to fire, scratch, water, and dust. Its smooth surface does not retain dirt, making it almost completely maintenance-free. The Yellow Onyx has manufactured in a COVID-19 safe environments.
